

Digitalcarnage - A self hosted server

digitalcarnage.co.uk a [self-hosted](#), homelab server based in the [United Kingdom](#).

- [Start Here](#)
- [Server Applications](#)
- [Domains Hosted](#)
- [Backups and howto](#)
- [Nextcloud Office](#)
- [Joplin Notes](#)

Start Here

The server software used is the freely available [Yunohost](#)

server software, which uses Debian Linux. Several applications, some public and some private, are hosted on this server. See [this page](#) for the full list of applications currently installed.

The hardware is a Dell small form factor ([SFF](#)) [7020 desktop PC](#) with an i7 4770 processor, 16 GB of RAM and a 2TB hard drive. (An old-fashioned spinner!). There is a nightly mail and data [backup](#), as well as a full backup on weekends. The backup is a simple cron job that performs a backup to an external 1 GB solid-state drive. A second 1 GB drive is used as a second backup using [Restic](#).

There are several domains hosted on the server that are registered through [iWantmyname](#). See the full list of domains here in [this](#) chapter.

For details about installing Yunohost and creating your self-hosted server, you can just jump straight in [here](#) to get started.

Digitalcarnage Base System

OS	Kernel	Linux Name	Yunohost Version
Debian 12.14	6.1.0-49-amd64	Bookworm	12.1.40.1 (stable)

Digitalcarnage's current server status can be [found here](#).

Server status uses the [Uptime Kuma](#) monitoring tool hosted by [PikaPod](#). It's always best to have your monitoring service not on your own server!

The full setup includes a [Raspberry Pi 4](#), which is used for "local" external access by admins, and selected users only use [WireGuard](#) as a VPN to allow "local" access to the Yunohost server. [Real VNC Server](#) is also installed on the Pi.

Server Applications

There are several applications for use on this server; the public can use some of them, but for the most part, they are for private use. However, an account can be created on those apps by asking the admin to create one for you. **SELF-REGISTRATION IS DISABLED** on most apps for obvious reasons!

Application Name	Type of Application	Link to Author	Link on this server	Notes
Bludit	Flat File CMS	Bludit	Bludit	Del Jones website
Bookstack	Document Wiki	Bookstack	Bookstack	This server's wiki
Collabora Server	Office suite server	Collabora	Collabora	Nextcloud Office
InvoiceNinja	Invoicing	InvoiceNinja	InvoiceNinja	PRIVATE
Jellyfin	Media server	Jellyfin	Jellyfin	You must have an account
LinkStack	Contact sharing	LinkStack	LinkStack	Del Jones' contact details
Lychee	Photo Gallery App	Lychee	Lychee	DJLD Capture gallery
My WebApp	Non YNH app installer	My WebApp	My WebApp	Used for DJ bio
Navidrome	Music and Radio Server	Navidrome	Navidrome	You must have an account
Nextcloud	Collaboration platform	Nextcloud	Nextcloud	You must have an account
Piwigo	Photo management	Piwigo	Piwigo	You must have an account
PhpMyAdmin	MySQL Admin	phpMyAdmin	PhpAdmin	Admin access only
ProjectSend	File sharing	ProjectSend	ProjectSend	You must have an account
Roundcube	Web-based email	Roundcube	Roundcube	You must have an account
Shaarli	Bookmark manager	Shaarli	Shaarli	You must have an account

SnappyMail	Web-based mail app	SnappyMail	SnappyMail	You must have an account
Vaultwarden	Password Manager	Vaultwarden	Vaultwarden	You must have an account
WordPress	Blog/Website publishing	WordPress	WordPress	Multiple instances installed

Domains Hosted

There are several domains hosted on this server, all of which are registered through [iwantmyname](#).

There is one domain that is registered with [DynDNS](#) courtesy of [Yunohost](#). When you install a Yunohost server, you receive one free domain. Click [here](#) for more details about installing your free domain once you have installed a Yunohost server.

DOMAINS (and sub-domains) HOSTED ON THIS SERVER

Domains & sub-domains

- [digitalcarnage.co.uk](#)
 - [links.digitalcarnage.co.uk](#)
 - [office.digitalcarnage.co.uk](#)
- [derekjones.net](#)
- [derekjoneslighting.com](#)
 - [accounts.derekjoneslighting.com](#)
- [vantours.co.uk](#)
 - [previous.vantours.co.uk](#)

Yunohost/dynDNS domain

- [casper.nohost.me](#)

Backups and howto

This Yunohost server is backed up onto two separate USB drives, both of which are *on-premise*. Several attempts have been made to perform an *off-premise* backup using both [Borg](#) and [Restic](#), but I have found them to be more difficult than it's worth!

Drive 1 (Drive label: YNHRECOVERY)

This backup uses the built-in Yunohost backup and recovery service. A simple cron job is used, detailing the time and what is to be backed up.

FULL BACK UP

- **Time:** Midnight every Wednesday and Sunday
- **What:** EVERYTHING. This is a full backup. Everything is checked off in the Yunohost back service.

OTHER

- **Time:** 4 AM EVERY day.
- **What:** User home folders and emails

Drive 2 (Drive label: DATARECOVERY)

This drive uses the Restic backup/recovery application, which is a third-party application. Again, a cron job is used to detail the times and what items are to be backed up.

- Time: 3 AM EVERY day
- What: The following folders are incrementally backed up:
 - */etc*
 - */home*
 - */var/www*
 - */opt*
 - */var/lib/mysql*
 - */usr/share/yunohost*

The difference between the two backups is that the Restic backup is incremental, and the last three backups are kept. The Yunohost backup is **not** incremental; therefore, some administration must be done to prune the drive as it becomes full.

HOW TO USE THE RESTIC BACKUP SERVICE (BASICS)

Restic is a backup service that can be installed from the CLI or through the Yunohost application catalogue. On this server, it has been installed using the CLI.

Where is the Restic app located? Type: `which restic` will show you where the app is located on your drive.

Where is my Restic repository located? The Restic repository can be found at `media/datarecovery/restic`. This is a symbolic link from the Restic directory on the main drive. The physical drive is a USB spinner labelled “**datarecovery**”.

What is the latest installed Restic version?

Type: `restic version`. This will tell you the current version, which right now is `restic 0.17.3`

Can I update Restic? Type: `restic self-update`. If there is an update available, it will be downloaded and installed.

Has the backup happened? Type: `restic check -r /media/datarecovery/restic`

How do I change the backup schedule? Type: `crontab -u root -e` Nano will open, and you can edit the time and contents of your backup.

Can I see the snapshots? Type: `restic -r /media/datarecovery/restic snapshots`

Can I see the contents of the snapshots? Type: `restic ls (snapshotID here) --repo /media/datarecovery/restic`

Can I mount the snapshot? Type: `restic -r /media/datarecovery/restic mount /mnt/restic`

NOTE: For most of the above commands, you will require the restic password that you set up when you created your repository, etc.

Nextcloud Office

All of the Nextcloud instances and their users have access to the online Collobara office suite. The Collobara Server is located in the digitalcarnage.co.uk domain as *office.digitalcarnage.co.uk*.
