

Start Here

The server software used is the freely available [Yunohost](#) server software which uses [Debian](#) Linux. There are several applications hosted on this server, some public, and some private. See [this page](#) for the full list of applications currently installed.

The hardware is a Dell small form factor ([SFF](#)) [7020 desktop PC](#) with an i7 4770 processor, 16 gigs of RAM and a 2TB hard drive. (An old-fashioned spinner!). There is a nightly mail and data [backup](#) and a full backup at the weekend. The backup is a simple cronjob that performs a backup to an external 1 gig solid-state drive. A second 1 gig drive is used as a second backup using [Restic](#).

There are several domains hosted on the server that are registered through [iWantmyname](#). See the full list of domains here in [this](#) chapter.

SSO users can login into the server [here](#). For details about installing yunohost and creating your own self-hosted server, you can just jump straight in [here](#) to get started.

Digitalcarnage Base System

OS	Kernel	Linux Name	Yunohost Version
Debian 12.8	6.1.0-26-amd64	Bookworm	12.0.7 (stable)

Digitalcarnage current server status can be [found here](#).

Server status uses the [Uptime Kuma](#) monitoring tool hosted by [PikaPod](#). It's always best to have your monitoring service not on your own server!
